

# QSG175: Silicon Labs Direction Finding Solution Quick-Start Guide

This version of QSG175 has been deprecated with the release of Simplicity SDK Suite 2025.12.0. For the latest version, see [docs.silabs.com](https://docs.silabs.com).

\*\*\*\*\*

Bluetooth version 5.1 introduced support for Direction Finding to provide a standard protocol for radio-based Real Time Locating Systems (RTLS). Silicon Labs not only supports this feature in its Bluetooth stack, but it also provides a reference implementation of a Real Time Locating System running over Bluetooth. This guide walks through the offered solution to help anyone get started with Direction Finding.

**KEY POINTS**

- Stack support for Direction Finding
- RTL library
- Architecture
- Demos and Examples
